

Cross hull tension lines used to "square up" the hull. Adjust until the "cross hull distances" are the same!

Board to support if the level is too short to span the width

Tape

Carpet remanates to support the chine. Try not to put them under the middle of the bottom panels!

Until the rails are on, it helps to have some scrap wood clamped to the tops of the bow and stern panels to keep straight!

Leveling tie down cords

Wired up Hull

Wired up hull ready for jump stitches and fillets

Large staple or eye screw in end of 2x6

Level the hull prior to doing the "jump stitch" and seam fillets!
